Protex Water-Shedding Pole Instruction Manual

The Water-Shedding Pole prevents water pooling on your furniture covers during wet weather. Stagnant water can shorten the lifespan of your furniture cover and may become unsightly or attract pests and insects if left ignored.

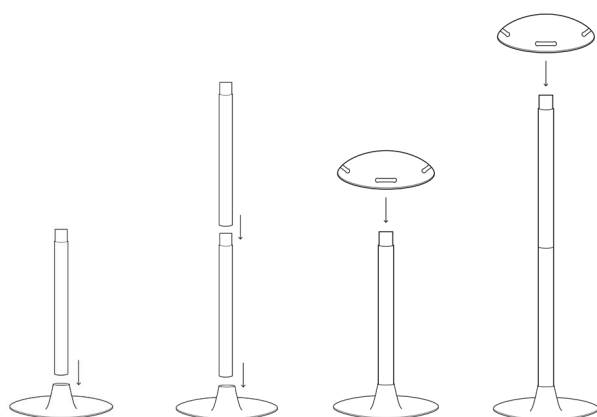

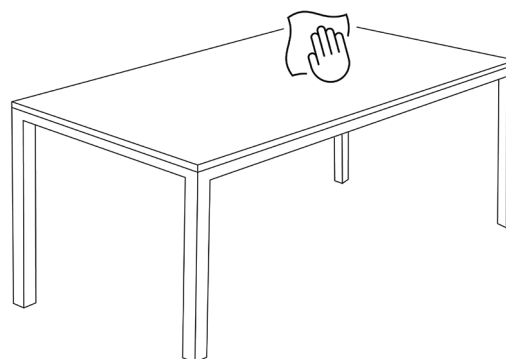

This Kit Includes:

- 1x Round Anchor Top
- 2x Tube Poles
- 1x Base
- 2x Locks
- 10m Webbing Strap

Step 1:

Please clean and then dry the table, and remove any chairs.

Familiarise yourself with the contents of this kit and identify each component.

Step 2:

Assemble the Round Anchor Top, 1 or 2 Tube poles depending on the size of your table, and the Base.

Larger tables will require 2 Tube Poles.

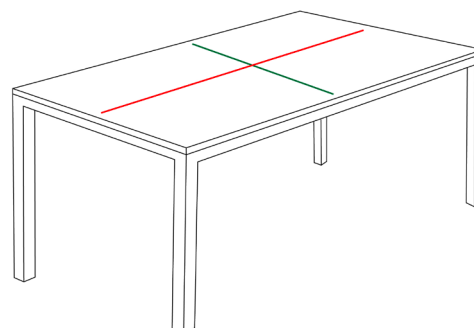

Step 3:

Measure your table and cut the Webbing Strap to the following sizes:

Table Length x2 + 100cm

Table Width x2 + 100cm

eg. For a table size of 170x90cm - cut 440x280cm

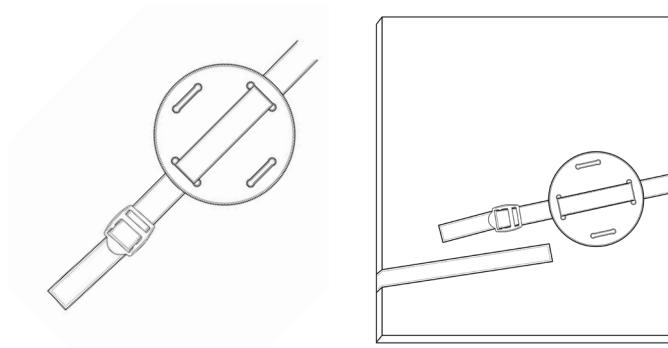

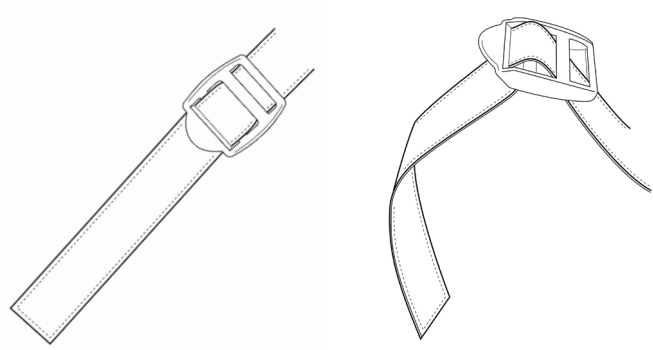

Step 4:

Place the Water-Shedding Pole into the middle of your table.

Step 5a:

Thread the Webbing through the Lock.

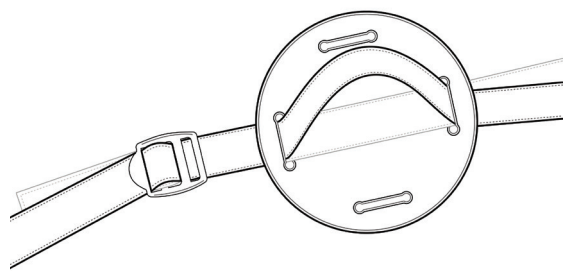

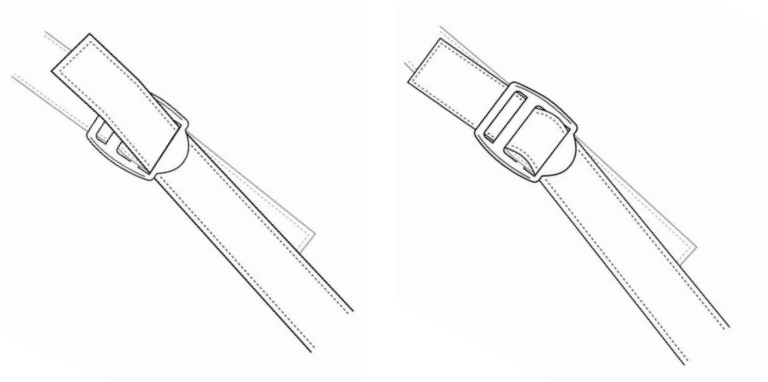

**Step 5b:**

Thread the head of Webbing through the Round Anchor Top, then round through the underside of the table and bring back over the top.

Step 6:

Thread the loose end of the Webbing through the lock, and pull to tighten.

Ensure that the straps are tight enough to give the pole sufficient stability.

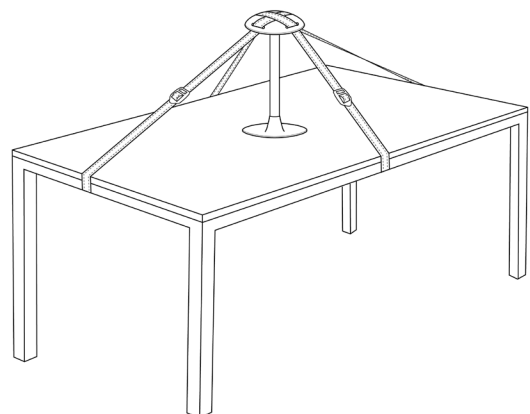

**Step 7:**

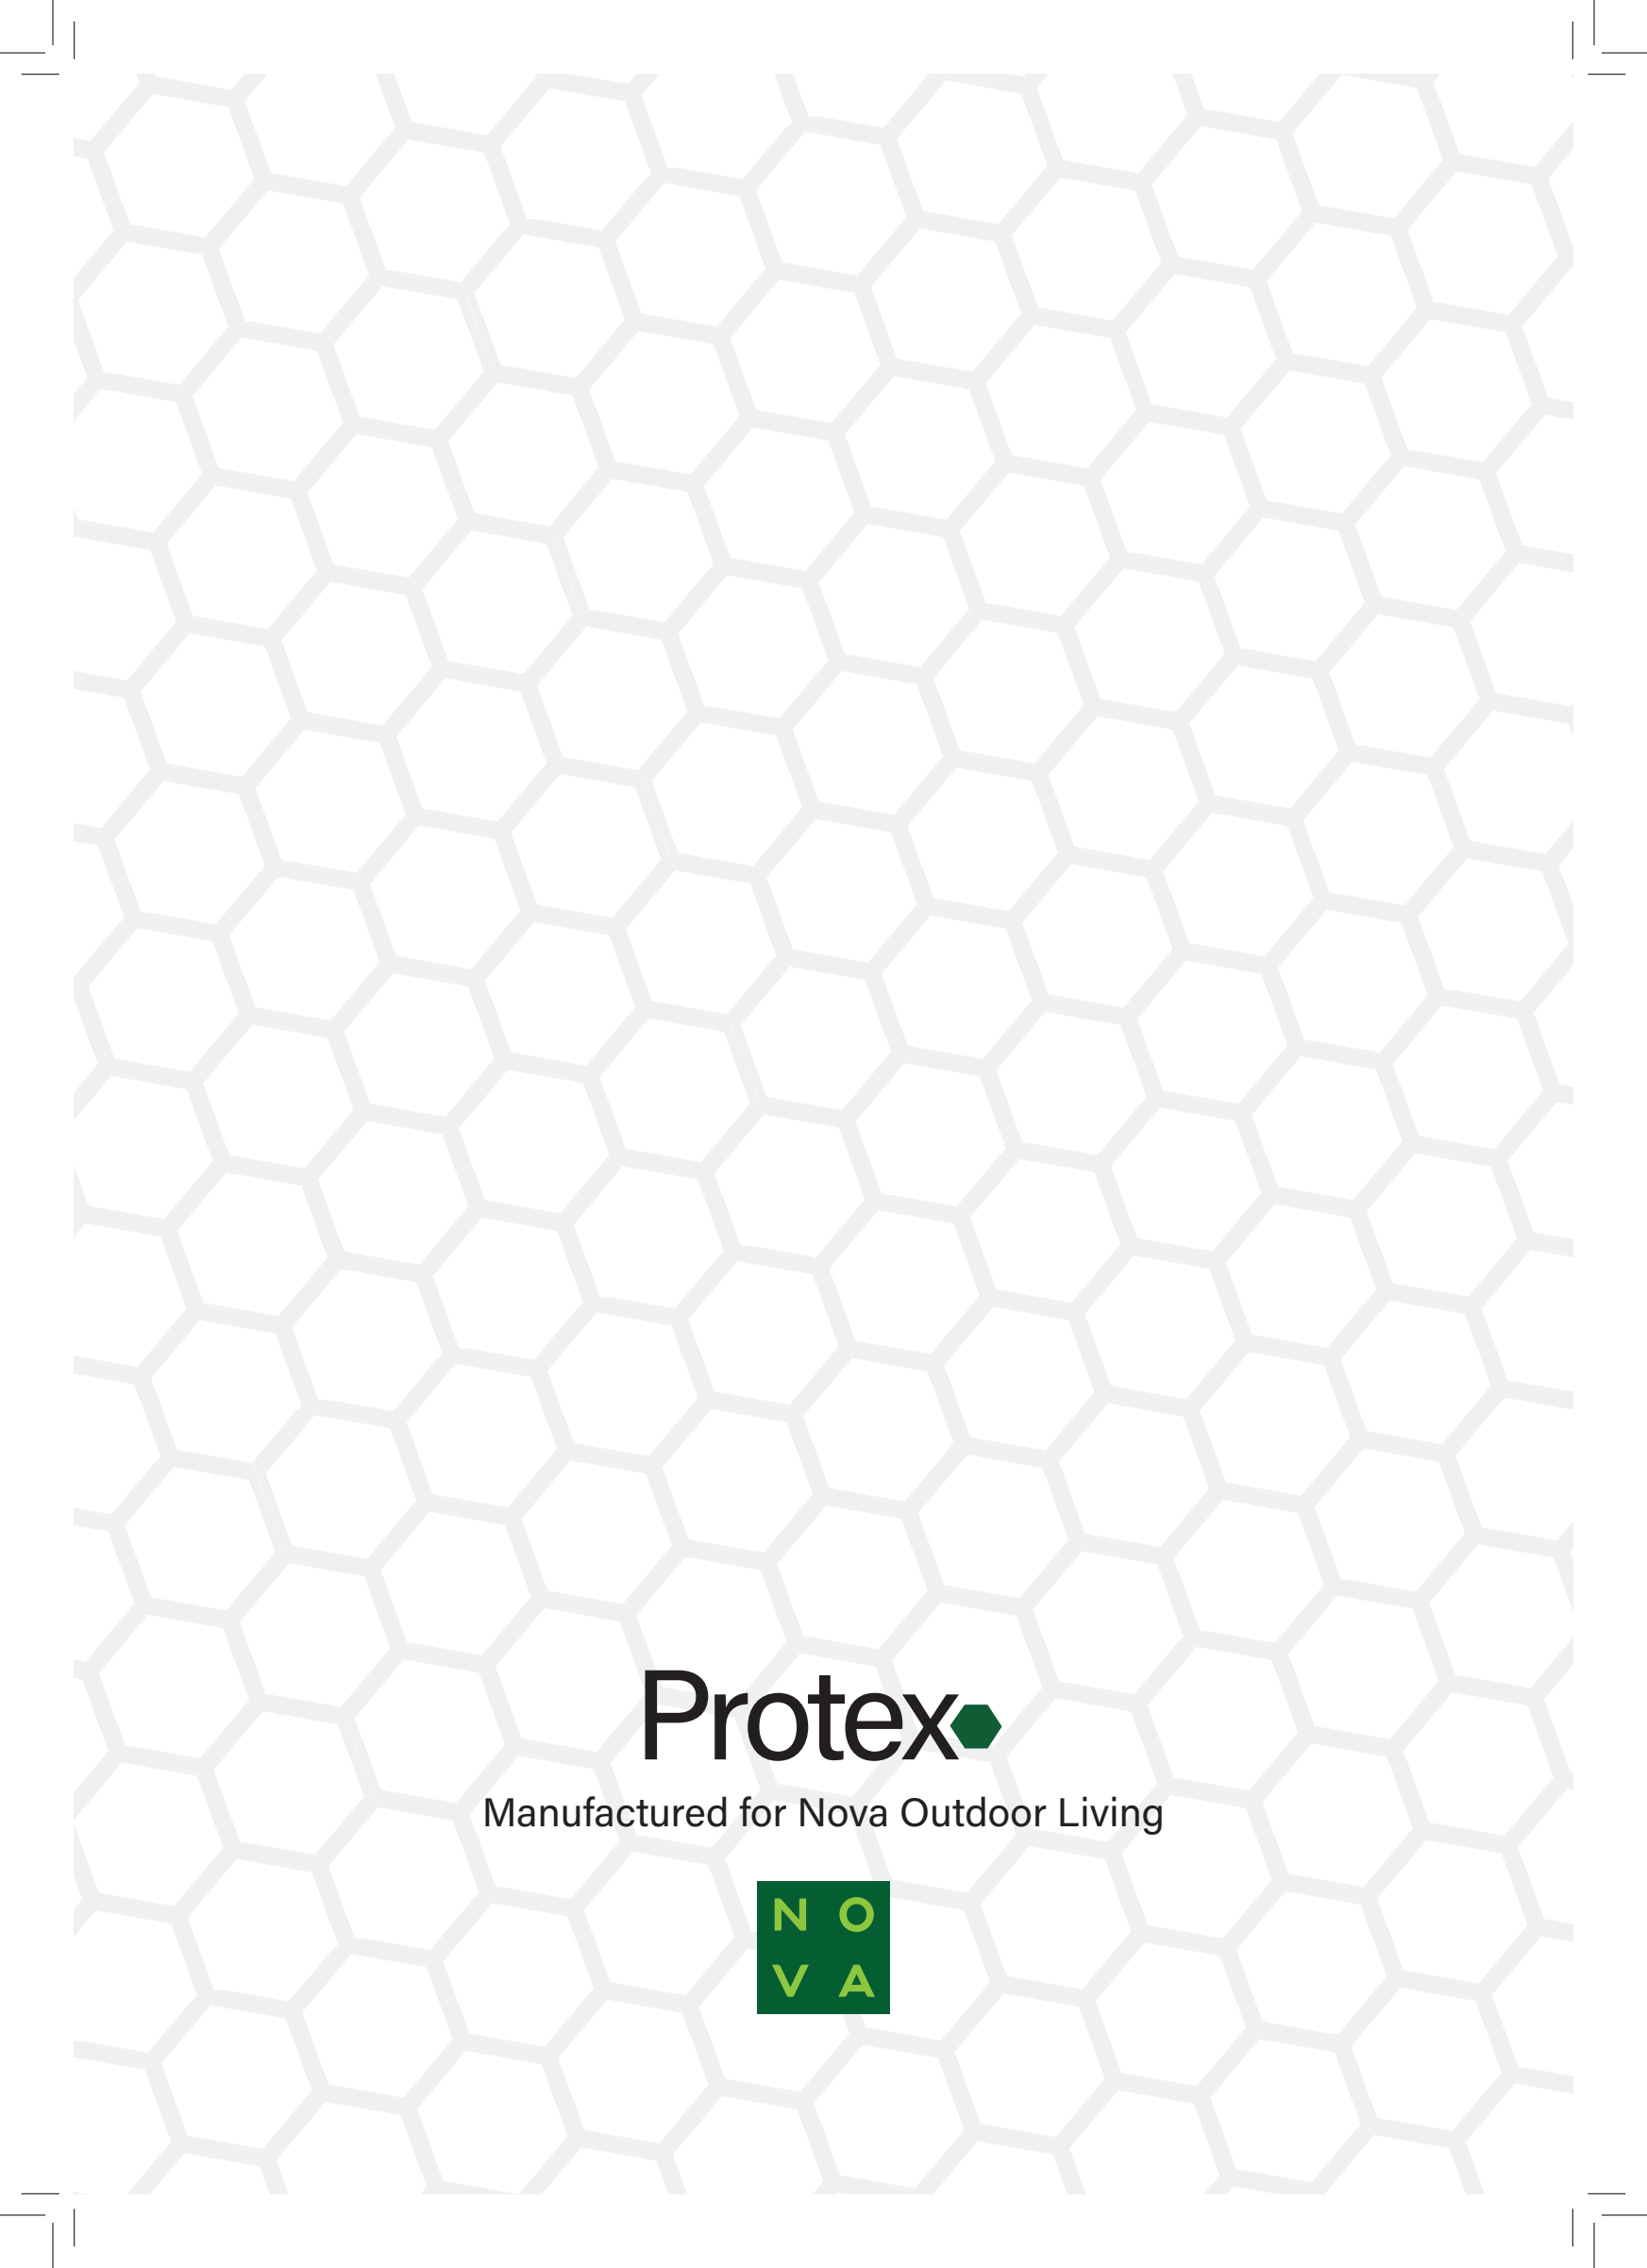

If there is any extra Webbing you can Thread this through the Round Anchor Top a second time so that it is tucked away and kept tidy.

Step 8:

Repeat steps 5 through 7 to fit the second Webbing Strap.

Adjust and ensure the final product is secure and holds your furniture cover in the desired position.
